

# JOIN US FOR LONG ISLAND CLEAN-WATER VENDOR DAY

Did you know outdated septic systems are the number one cause of nitrogen pollution on Long Island? Nitrogen pollution has resulted in beach closures harmful algal blooms, thick mats of seaweed, fish kills and the decline of shellfishing. Swapping outdated septic systems with clean-water technology can remove up to 90% of nitrogen pollution from our wastewater.

Want to know more about how you can help improve water quality on Long Island? Join us at Long Island Clean-Water Vendor Day to see septic systems designed to reduce nitrogen pollution in Long Island's rivers, beaches, and bays.

## FEATURED AT LI CLEAN-WATER VENDOR DAY

- ✓ Qualify for up to \$20,000 in reimbursements to upgrade to a clean-water septic system through Nassau's SEPTIC Program.
- ✓ See science at work and view high-tech clean-water septic systems.
- ✓ Sign up for courses to become a certified clean-water septic installer.
- ✓ Apply for a Nassau County Home Improvement License to install clean-water septic systems.
- ✓ Catch up with local environmental groups' clean-water projects.
